#### REMARKS

The Office raises an objection concerning wording in the Abstract. The abstract presently is amended in a manner that is believed to fully respond to this matter. Also, a paragraph on page 9 is amended to correct an editorial error.

Claims 5, 7 and 11 are rejected under 35 U.S.C. Section 112, second paragraph because these claims do not disclose how long it should take to heat the adhesive or what the adhesive properties comprise. The claims are amended to recite that the heat responsive coupling member comprises a hot melt adhesive that is bonded to the embolic coil and releases therefrom upon being heated. It is respectfully asserted that one of ordinary skill in the art would understand the adhesive properties of a hot melt adhesive when heated. Applicants also respectfully observe that the relevant claims are rendered more definite by specifying that such heating is to about 65°C than if no temperature were specified or if no yield strength threshold were specified. Applicants respectfully request reconsideration and withdrawal of this Section 112 rejection of claims 5, 7 and 11.

Claims 1-13 are rejected under 35 U.S.C. Section 103 from Saadat, et al. WO/97/01368 ("Saadat") in view of Lee et al. U.S. Patent No. 5,911,737 ("Lee").

Claims 1 and 10 are presently amended to specify that the heat responsive coupling member couples to the heating element by a hot melt adhesive bond and comprises a biocompatible adhesive that exhibits the characteristic of releasing the embolic coil when the adhesive is heated. Support for this adhesive bond and biocompatible adhesive subject matter is found, for example, at line 14-18 of page 11 and at line 9 of page 10. Support for the coupling member comprising a hot melt adhesive and its characteristic of releasing are found, for example, at lines 10-12 of page 10 and other passages.

Newly submitted claim 14 provides further properties about the hot melt adhesive, namely that it softens when heated so it may be stretched. Support therefor is found, for example, at lines 9-10 of page 10.

Claim 15 specifies that the hot melt adhesive has a lower yield strength after heating than before heating, support therefor being found, for example, from line 23 of page 10 to line 12 of page 11.

Claim 16 specifies that the hot melt adhesive softens so that it may be stretched when heated to at least about 63°C, support therefor being found, for example, at lines 10-15 of page 10, together with original claim 3.

Claim 17 specifies that the heat responsive coupling member breaks when the delivery member is retracted with respect to the positioning member, support therefor being found, for example, at lines 1-2 of page 11 and in Figs. 4 and 5.

This disclosure also supports new claim 18, and lines 12-18 of page 11 support new claim 18, which specifies that the embolic coil release comprises disengaging the heating element from the embolic coil by breaking the adhesive bond.

Concerning Saadat, the Office acknowledges this patent publication does not teach a non-metallic polymer heat responsive coupling member coupled to a heating element. Saadat teaches that coupling is accomplished by a shape memory alloy which moves between a first configuration and a second configuration depending upon temperature. Applicants further observe that Saadat does not teach or disclose a non-metallic polymer heat responsive coupling member that couples a heating element to an embolic coil by an adhesive bond or that such a responsive coupling member comprises a biocompatible adhesive,

all as specified in present claims 1 and 10. The teaching of Saadat also is deficient with a respect to present dependent claims of this application.

Lee is cited for teaching a vascular occlusion coil deployment system that incorporates a polymer heat responsive coupling member. The Office takes the position that this heat responsive coupling member is "adhesively bonded" to the embolic coil. It is respectively believed that the definition of adhesive that is presented in the Office Action is not consistent with the presently claimed invention. The dictionary definition presented by the Office, in the context of the teaching of Lee, does not lead to a conclusion that Lee discloses an adhesive bond with a biocompatible adhesive, as specified in present claims 1 and 10.

To further illustrate this, applicants attach a copy from Merriam Webster's Collegiate Dictionary, Tenth Edition, wherein the noun form of "adhesive" is that of a glue or cement substance. Also attached is an excerpt from the American Heritage Dictionary, Second College Edition, which provides substantially the same definition for the noun form of adhesive, while providing an adjective form of adhesive that does not comport with the teachings of Lee. This latter definition is

"tending to adhere; sticky." Furthermore, a print-out from an on-line dictionary in response to a query for "adhesive" is enclosed. The first page of this print-out enclosure gives a definition of the adjective form of adhesive as "having the property of adhering; gluey, gooey, gummy, sticky, tacky." Similar definitions are found on page 3 of this print-out enclosure, including: "an adhesive is a compound that adheres or bonds two items together."

Rather than teaching a biocompatible adhesive that provides an adhesive bond to couple components together, Lee would have taught one of ordinary skill in the art to provide a tubing (10) made of a shape memory polymer that undergoes a phase transformation at a specified temperature. The teaching of Lee is to elevate the temperature of such a tubing above this phase transformation temperature so that it will soften and reshape to move from a shape of a cylinder such as shown in Fig. 1B to a shape such as that shown in Fig. 1C, a shape conforming to ball (12) of a coil (11).

From the above, it is evident that Lee does not remove the deficiencies of Saadat in order to arrive at the invention specified in presently amended claims 1 and 10. Lee does not teach one of ordinary skill in the art to provide an adhesive

bond between a heating element and the coil of Lee or Saadat.

Nor does Lee disclose a biocompatible adhesive. Nor does Lee disclose an arrangement that releases an adhesive bond and the embolic coil.

Furthermore, Lee does not disclose subject matter of current claims. For example, Lee does not teach a hot melt adhesive or an adhesive that may be stretched when heated in order to release the adhesive bond (claim 14), or movement between a delivery member and a positioning member that breaks an adhesive bond (claims 17 and 18).

From the above, applicants respectfully observe that, even if it had been obvious to combine Saadat with Lee, the invention as specified in applicants' claims would not have been arrived at.

Claims 1-13 are rejected under the judicially created doctrine of obviousness-type double patenting from claims 1, 5, 7 and 28 of U.S. Patent No. 6,277,126. Also, claims 1-4 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting from claims 1-4 of co-pending application No. 10/722,335. Applicants enclose two Terminal Disclaimers.

It is respectfully understood that submission of these
Terminal Disclaimers overcomes these double-patenting
rejections. These submissions are made without admitting the
propriety of the rejections and is done in order to serve the
statutory function of removing the double-patenting rejections,
and this action raises neither a presumption nor an estoppel
with respect to the merits of the double-patenting rejections.

Reconsideration and withdrawal of the Section 112, Section 103 and double-patenting rejections are respectfully requested, as is the allowance of the present application.

Favorable consideration and allowance are respectfully requested.

Respectfully submitted,

COOK, ALEX, MCFARRON, MANZO, CUMMINGS & MEHLER, LTD.

### A GENUINE MERRIAM-WEBSTER

The name Webster alone is no guarantee of excellence. It is used by a number of publishers and may serve mainly to mislead an unwary buyer.

Merriam-Webster™ is the name you should look for when you consider the purchase of dictionaries or other fine reference books. It carries the reputation of a company that has been publishing since 1831 and is your assurance of quality and authority.

ad-he-sive (ad-he'siv, -ziv) adj. 1. Tending to adhere; sticky. 2. Gummed so as to adhere. -n. An adhesive substance, such as paste or cement. -ad-he'sive-ly adv. -ad-he'sive-

adhesive tape n. A tape lined on one side with an adhesive ad hoc (ad hok', hok') adj. & adv. For a specific purpose, case, or situation: an ad hoc committee. [Lat., to this.] ad homi-nem (ad hom'-nem') adj. & adv. To the man;

appealing to personal interests, prejudices, or emotions rather than to reason: an ad hominem argument. [Lat.]

ad·i·a·bat·ic (ăd'ē-a-bāt'īk, ā'dī-a-) adj. Of, pertaining to, or designating a reversible thermodynamic process executed at constant entropy; loosely, occurring without gain or loss of heat. [Gk. adiabatos, impassable: a-, not + diabatos, passable (dia, through + batas, passable < bainein, to go).] -ad'i-a-bat'i-cal·ly *ad*v.

a-dieu (3-dy50', 3-d50') interj. Good-by; farewell. —n., pl. a-dieus or a-dieux (3-dy50z', 3-d50z'). A farewell. [ME < OFr. a dieu, (I commend you) to God: a, to (< Lat. ad) + Dieu, God < Lat. deus.]

ad in-fi-ni-tum (ăd in'fo-nī'tom) adj. & adv. To infinity; without end; limitless. [Lat.]

ad in-ter-im (ad in'tor-om) adj. & adv. In the meantime;

meanwhile. [Lat.]

ad·l·os (ād'ē-ōs', ā'dē-) interj. Good-by; farewell. [Sp. adīos:

a, to (< Lat. ad) + Dios, God < Lat. deus.]

ad·l·po-cere (ād'ə-pō-sīr') n. A brown, fatty, waxlike substance that forms on dead animal tissues in response to

moisture. [ADIPO(SE) + Lat. cera, wax.]

ad-l-pose (ad'a-pos') adj. Of or related to animal fat; fatty.

-n. The fat found in adipose tissue. [NLat. adiposus < Lat.

adeps, lard.] —ad'i-pose'ness, ad'i-pos'i-ty (-pōs'i-tē) n. adipose tissue n. Connective tissue in the body that contains stored cellular fat.

ad-it (ad'it) n. An almost horizontal entrance to a mine. [Lat. aditus, access < adire, to approach: ad-, toward + ire, to

ad-ja-cen-cy (2-jā'sən-sē) n., pl. -cies. 1. The state of being adjacent; contiguity. 2. A thing that is adjacent. ad-ja-cent (2-jā'sənt) adj. 1. Close to; lying near. 2. Next to; adjoining. [ME < Lat. adjacens, pr.part. of adjacēre, to lie near: ad, near to + jacēre, to lie.] —ad-ja-cent-ly adv.

adjacent angle n. Either of two angles having a common side and a common vertex.

ad-jec-ti-val (aj'ik-ti'vəl) adj. Of, pertaining to, or function-

ing as an adjective. —adjectival-ty adv. adjective (ājīk-tīv) n. 1. Gram. Any of a class of words used to modify a noun or other substantive by limiting, qualifying, or specifying. 2. Ling. Any of a form class distinguished in English morphologically by one of several suffixes, as -able, -ous, -er, and -est, or syntactically by position in a phrase or sentence, as white in a white house. 3. A dependent or subordinate. [ME < OFr. adjectif < Lat. adjectif vus < adjicere, to add to: ad-, to + jacere, to throw.] ad'jec-tive-ly adv.

adjective pronoun n. Gram. A pronoun acting as an adjective, as which in which dictionaries? or himself in He himself

ad-join (2-join) v. -joined, -join-ing, -joins. —tr. 1. To be next to; be contiguous to. 2. To attach to; unite. —intr. To

be contiguous. [ME ajoinen < OFr. ajoindre < Lat. adjun-

gere, to join to : ad-, to + jungere, to join.] ad-join-ing (2-joi'nīng) adj. Neighboring; contiguous; next

ad-journ (2-jūrn') v. -journed, -journ-ing, -journs. —tr. To suspend until a later stated time. —intr. 1. To suspend proceedings to another time or place. 2. Informal. To move from one place to another: adjourned to the living room. [ME ajournen COFr. ajourner: a, to (< Lat. ad) + jour, day <

Lat. diurnum.) —ad-journ'ment n.
ad-judge (a-jūj') tr.v. -judged, -judg-ing, -judg-es. 1. To determine or decide by judicial procedure; adjudicate. 2. To order judicially; rule. 3. To award (damages, for example) by law. 4. To regard, consider, or deem. [ME ajugen < OFr.

ajuger < Lat. adjudicare. —see ADJUDICATE.]

ad-ju-di-cate (2-joō'di-kāt') tr.v. -cat-ed, -cat-ing, -cates. To hear and settle (a case) by judicial procedure. [Lat. adjudicare, adjudicat-, to award to (judicially): ad-, to + judicare, to judge < judge, judge.] —ad-ju'dl-ca'tion n. —ad-ju'dl-ca'-tive adj. —ad-ju'dl-ca'tor n.

ad-junct (aj'ungkt') n. 1. Something attached to another thing but in a dependent or subordinate position. 2. A person associated with another in some duty or service in a subordinate or auxiliary capacity. 3. A word or words added in order to clarify, qualify, or modify other words. 4. Logic. A nonessential attribute of a thing. —adj. 1. Added or connected in a subordinate or auxiliary capacity: an adjunct clause. 2. Attached to a faculty or staff in a temporary or auxiliary capacity. [Lat. adjunctum < adjunctus, p.part. of adjungere, to join to. -see ADJOIN.] -ad-

junc'tion (a-jungk'shan) n.—ad-junc'tive adj. ad-ju-ra-tion (āj'a-rā'shan) n. An earnest or solemn appeal.

—ad-jur'a-to'ry (a-joor'a-tor'e, -tor'e) adj.
ad-jure (a-joor') tr.v. -jured, -juring, -jures. 1. To command or enjoin solemnly, as under oath. 2. To appeal to or entreat earnestly. [ME adjuren < Lat. adjurare, to swear to : ad-, to + jurare, to swear.) —ad-jur'er, ad-ju'ror n.

ad-just (3-just') v. -just-ed, -just-ing, -justs. —tr. 1. To change so as to match or fit; cause to correspond. 2. To bring into proper relationship. 3. To adapt or conform, as to new conditions: unable to adjust themselves to their environment. 4. To make accurate by regulation. 5. To decide how much is to be paid on (an insurance claim). 6. To correct (the range and direction of a gun) in firing. -intr. To adapt oneself; become suited or fit; conform. [Obs. Fr. adjuster < OFr. ajoster: Lat. ad, to + Lat. juxta, near.] —ad-just'a-ble adj. —ad-just'a-bly adv. —ad-just'er, ad-just'er n. ad-just'ment (2-just'ment) n. 1. a. The act of making fit or conformable. b. The condition of being adjusted. 2. A means for adjusting. 3. The settlement of a debt or claim. 4. A modification or correction: an adjustment on a bill ad-ju-tant (āj'a-tant) n. 1. A staff officer who helps a com-

manding officer with administrative affairs. 2. An assistant, 3. The marabou. [Lat. adjutans, adjutant-, pr.part. of adjutare, freq. of adjuvare, to help: ad-, to + juvare, to help.] ad'ju-tan-cy (-tən-sē) n.

adjutant general n., pl. adjutants general. 1. An adjutant of a unit having a general staff. 2. An officer in charge of the National Guard of one of the states of the United States. 3. Adjutant General. The chief administrative officer, a major general, of the U.S. Army.

adjutant stork n. The marabou.

ad-ju-vant (āj'o-vənt) n. 1. A pharmacological agent added to a drug to increase or aid its effect. 2. An immunological agent that increases the antigenic response. [Lat. adjuvans, adjuvant-, pr.part. of adjuvare, to help.—see AID.]

Ad-le-ri-an (åd-lîr'ē-ən) adj. Of or relating to a psychological

school holding that behavior arises in subconscious efforts to compensate for inferiority or deficiency and that neurosis results from overcompensation. [After Alfred

(1870-1937).]
ad lib (ad lib') adv. In an unrestrained manner; freely; spon-

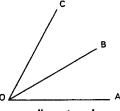

taneously. [Short for AD LIBITUM.] ad-lib (ad-lib') Informal. —v. -libbed, -lib-bing, -libs. —tr. To improvise and deliver extemporaneously. —intr. To improvise, as a speech; extemporaze. —n. Words, music, or actions ad-libbed. -adj. Spoken or performed spontaneously. -ad-lib'ber n.

ad lib-i-tum (ad lib'i-tom) adj. Mus. Performed with freedom. Used as a direction. [Lat. ad, to + libitum, pleasure.] ad-man (ăd'mān') n. Informal. A person employed in the advertising business.

ad-meas-ure (ad-mezh'ər) tr.v. -ured, -ur-ing, -ures. To divide and distribute proportionally; apportion. [ME amesuren < OFr. amesurer: a, to (< Lat. ad) + mesurer, to measure.]—ad-meas'ure-ment n.—ad-meas'ur-er n.
Ad-me-tus (ād-mē'təs) n. Gk. Myth. A king of Thessaly and

husband of Alcestis. [Lat. < Gk. Admētos.] ad-min-is-ter (ad-min'i-star) v. -tered, -ter-ing, -ters. -

1. To have charge of; manage. 2. a. To give or apply in a formal way: administer the last rites. b. To apply as a remedy: administer a sedative. 3. To mete out; dispense: administer justice. 4. To manage or dispose of (a trust or estate) under a will or an official appointment. 5. To impose, offer, or tender (an oath, for example). —intr. 1. To manage as an administrator. 2. To minister: administering to their every

#### **Encyclopedia**

adhesive, substance capable of sticking to surfaces of other substances and bonding them to one another. The term *adhesive cement* is sometimes used in place of *adhesive*, especially when referring to a synthetic adhesive. Animal glue, a gelatin made from hides, hooves, or bones, was probably known in prehistoric times; it remained the leading adhesive until the 20th cent. It is now used especially in cabinetmaking. Animal glue is sold both as a solid (either ground or in sheets, to be melted in a water-jacketed glue pot and applied while hot) and as liquid glue (an acidic solution). Adhesives from vegetable sources are also important; they include natural gums and resins, mucilage, and starch and starch derivatives. They are commonly used for sizing paper and textiles and for labeling, sealing, and manufacturing paper goods. Other adhesives derived from animal and vegetable sources include blood glue, casein glue, fish glue, rubber adhesives, and cellulose derivatives. Adhesives having special properties are prepared from synthetic resins. Some synthetic adhesives, such as the epoxy resins, are strong enough to be used in construction in place of welding or riveting. Adhesive tapes have a coating of pressure-sensitive adhesive.

The noun adhesive has one meaning:

Meaning #1: a substance that unites or bonds surfaces together

Synonym: adhesive material

The adjective adhesive has one meaning:

Meaning #1: tending to adhere

Antonym: nonadhesive (meaning #1)

#### <u>Wikipedia</u>

adhesive

An adhesive is a compound that <u>adheres</u> or bonds two items together. Adhesives may come from either natural or synthetic sources. Some modern adhesives are extremely strong, and are becoming increasingly important in modern construction and industry.

#### History

The first adhesives were <u>gums</u> and other plant <u>resins</u>. Archaeologists have found 6000-year-old <u>ceramic</u> vessels that had broken and been repaired using plant resin. Most early adhesives were <u>animal glues</u> made by rendering animal products such as the Native American use of <u>buffalo</u> <u>hooves</u>. Native Americans in what is now the eastern <u>United States</u> used a mixture of <u>spruce</u> gum and fat as adhesives and as <u>caulk</u> to waterproof seams in their <u>birchbark</u> canoes.

### Categories of adhesives

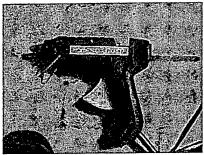

#### Drying adhesives

These adhesives are a mixture of ingredients (typically <u>polymers</u>) dissolved in a solvent. Glues and rubber cements are members of the *drying adhesive* family. As the solvent evaporates, the adhesive hardens. Depending on the chemical composition of the adhesive, they will adhere to different materials to greater or lesser degrees. These adhesives are typically weak and are used for household applications. Some intended for small children are now made non-toxic.

#### Hot adhesives

A glue gun, an example of a hot adhesive

Also known as "hot melt" adhesives, these adhesives are applied hot and simply allowed to harden as they cool. These adhesives have become popular for crafts because of their ease of use and the wide range of common materials to which they can adhere. A glue gun, pictured right, is one method of applying a hot adhesive. The glue gun melts the solid adhesive and then allowing it to pass through the "barrel" of the gun onto the material where it solidifies.

#### Reactive adhesives

<u>Epoxy resins</u> are the most common example of this kind of adhesive. Reactive adhesives generally come in two separate containers. The two ingredients of the adhesive must be mixed in certain proportions immediately before application. Generally one ingredient is a <u>monomer</u>, or <u>resin</u>, and the second is a reaction initialiser. When the two are mixed together, a <u>polymerisation</u> reaction occurs which solidifies the adhesive.

Reaction adhesives may also react with the surface of the materials to be stuck together. This process is called <u>bonding</u>, in which the adhesive forms chemical bonds with the material, and is distinct from sticking, the action of common glues.

A special case of this kind of adhesive is <u>cyanoacrylate</u> (more commonly known by the brand name "super glue") which reacts with trace moisture on the surfaces being bonded and therefore does not need any mixing before application.

Reactive adhesives are very strong and are used for high-stress applications such as attaching wings to aircraft. Because the strength of a reactive adhesive is a result of chemical bonding with the surface material, reactive adhesives are applied in thin films. Reactive adhesives are less effective when there is a secondary goal of filling gaps between the surfaces..

Such adhesives are frequently used to prevent loosening of bolts and screws in rapidly moving assemblies, such as automobile engines. They are largely responsible for the quieter running modern car engines.

#### Temporary adhesives

Temporary adhesives are designed to repeatedly or easily stick and unstick. They have low adhesion and generally can not support much weight. They are commonly used on paper, but can be used on many other things. They have common applications such as as bookmarks, informal notes, and office supplies. Brands include <u>Blu-Tack</u>, a gum-like adhesive (a.k.a. "sticky tak"), <u>adhesive bandages</u>, and the pressure-activated adhesive applied to the back of <u>3M</u>'s <u>Post-It notes</u>. The adhesives on items such as duct tape can generally adhere longer than these other products.

Also see adhesive tape and gaffer tape.

#### Adhesive failure

Adhesives may fail in one of two ways:

Adhesive failure is the failure of the adhesive to stick or bond with the material to be adhered (also known as the substrate or adherend).

Cohesive failure is structural failure of the adhesive. Adhesive remains on both substrate surfaces, but the two items separate.

Two substrates can also separate through structural failure of one of the substrates; this is not a failure of the adhesive. In this case the adhesive remains intact and is still bonded to one substrate and the remnants of the other.

For example, when one removes a price label, adhesive usually remains on the label and the surface. This is cohesive failure. If, however, a layer of paper remains stuck to the surface, the adhesive has not failed.

As another example, children often try to pull apart <u>Oreo</u> cookies with the filling all on one side. The goal is an adhesive failure, rather than a cohesive failure.
